Software

Third Party Data (3PD)

for UtiliCore (WaterCore & GasCore)

Technolog is the leading provider of end to end solutions delivering reliable, repeatable and relevant data to UK Gas and Water Utilities. A key part of this is the operability, availability and security of data on our UtiliCore web portals - WaterCore and GasCore.

Our Third Party Data (3PD) feature pack further advances the functionality of Utilicore to allow users to visualise and manage additional data sets within the same feature rich user interface. This powerful feature enables users to exploit previously separate data sources into one user interface. In conjunction with our Advanced API, data sets can be injected in near real time to allow users to make informed decisions and optimise network management.

Furthermore, 3PD sets can be made available to the Advanced API for onward data flows, allowing Utilicore to operate as a broker service to our customers.

Key Features

- Central platform to visualise separate data sources
- Data stored within our secure Utilicore hosted environment
- User friendly configuration & management
- Real time data ingestion via Advanced API
- Broker facility for onward transit of data

Examples of 3PD data types:

- Non Technolog data loggers
- Vehicle telematics
- Weather
- Traffic
- Map layers with POI
- RSS feeds
